## ◆ RAMAN SPECTROSCOPY AND XPS GRAPHENE WORKSHOP

Thermo Fisher Scientific will be hosting a workshop on graphene characterization using both Raman and X-ray Photoelectron spectroscopy on the 13th of April. During the workshop, they will demonstrate how each technique is invaluable in the characterization of graphene. Through presented studies and live demonstrations they will provide a detailed overview of the kinds of information you can obtain from graphene materials and give you a chance to get hands on experience with the latest state of the art instrumentation. The workshop will highlight the innovation in both technologies and show how both techniques are no longer the reserve of the research scientist but a tool for the analytical laboratory. There will also be time to talk to our senior application scientists to find out how we can help discuss application needs. Stay posted from more details.
